

### **Amendments to the Claims:**

This listing of claims will replace all prior versions and listings of claims in the application.

#### **Listing of Claims:**

1. (Cancelled)
2. (Previously Presented) A gas valve, comprising:
  - a first base member having opposing first and second sides and including at least first, second and third storing chambers, first and second outlet openings, and an inlet opening, the first storing chamber being in communication with the inlet opening, the second storing chamber being in communication with the first outlet opening, and the third storing chamber being in fluid communication with the second outlet opening;
  - a second base member coupled to the second side of the first base member and including first and second valve bores, a pressure inlet hole, and a pressure outlet hole;
  - first and second electromagnetic valves mounted in the first and second valve bores of the second base member;
  - a first adjustable member positioned adjacent to the first side of the first base member and configured to be controlled by the first electromagnetic valve to control fluid flow between the first storing chamber and the second storing chamber; and
  - a second adjustable member positioned between the second side of the first base member and the second base member and configured to be controlled by the second electromagnetic valve to control fluid flow between the first storing chamber and the third storing chamber.
3. (Previously Presented) The valve of claim 2, wherein the first adjustable member includes a first fixing member and a first washer coupled to the first fixing member.
4. (Previously Presented) The valve of claim 3, wherein the second adjustable member includes a second fixing member and a second washer coupled to the second fixing member.

5. (Currently Amended) The valve of claim [[2]] 3, further comprising a first plate structure positioned adjacent to the first fixing member to sealably retain the first adjustable member to the first base member.
6. (Previously Presented) The valve of claim 5, further comprising a second plate structure positioned between the first base member second side and the second adjustable member.
7. (Previously Presented) The valve of claim 2, further comprising an air pressure valve positioned in the first base member and movable between open and closed positions.
8. (Previously Presented) The valve of claim 7, further comprising an actuating member mounted to the first base member and configured to actuate the air pressure valve.
9. (Previously Presented) The valve of claim 2, wherein the pressure inlet hole and the pressure outlet hole each include an opening that extends through the second base member, and the valve further includes first and second pressure adjustment bolts movable within respective pressure inlet and outlet holes.
10. (Previously Presented) The valve of claim 6, wherein the second plate structure includes a plurality of holes in fluid communication with the pressure inlet and outlet holes.
11. (Previously Presented) The valve of claim 2, wherein the second electromagnetic valve includes a pressure regulating knob.
12. (Previously Presented) The valve of claim 3, wherein the second adjustable member includes a plurality of holes in fluid communication with the pressure inlet and outlet holes.
- 13-22. (Canceled)
23. (Previously Presented) A gas valve, comprising:

a first base member having opposing first and second sides and including first and second outlet openings, and an inlet opening;

a second base member coupled to the second side of the first base member and including first and second valve bores;

first and second electromagnetic valves mounted in respective first and second valve bores of the second base member;

a first adjustable member positioned adjacent to the first side of the first base member and configured to be controlled by the first electromagnetic valve to control fluid flow between the inlet opening and the first outlet opening; and

a second adjustable member positioned between the second side of the first base member and the second base member and configured to be controlled by the second electromagnetic valve to control fluid flow between the inlet opening and the second outlet opening.

24. (Previously Presented) The valve of claim 23, wherein the first base member further includes at least first, second and third storing chambers, the first storing chamber being in communication with the inlet opening, the second storing chamber being in communication with the first outlet opening, and the third storing chamber being in fluid communication with the second outlet opening, the first adjustable member being configured to control fluid flow between the first and second storing chamber, and the second adjustable member being configured to control fluid flow between the first and third storing chambers.

25. (Previously Presented) The valve of claim 23, wherein the second base member further includes a pressure inlet hole and a pressure outlet hole.

26. (Previously Presented) The valve of claim 23, wherein the first adjustable member includes a first fixing member and a first washer coupled to the first fixing member.

27. (Currently Amended) The valve of claim ~~[[23]]~~ 26, wherein the second adjustable member includes a second fixing member and a second washer coupled to the second fixing member.

28. (Currently Amended) The valve of claim ~~[[23]]~~ 26, further comprising a first plate structure positioned adjacent to the first fixing member to sealably retain the first adjustable member to the first base member.
29. (Previously Presented) The valve of claim 28, further comprising a second plate structure positioned between the first base member second side and the second adjustable member.
30. (Previously Presented) The valve of claim 23, further comprising an air pressure valve positioned in the first base member and movable between open and closed positions.
31. (Previously Presented) The valve of claim 30, further comprising an actuating member mounted to the first base member and configured to actuate the air pressure valve.
32. (Previously Presented) The valve of claim 25, wherein the pressure inlet hole and the pressure outlet hole each include an opening that extends through the second base member, and the valve further includes first and second pressure adjustment bolts movable within respective pressure inlet and outlet holes.
33. (Previously Presented) The valve of claim 29, wherein the second plate structure includes a plurality of holes in fluid communication with the inlet and outlet openings.
34. (Previously Presented) The valve of claim 23, wherein the second electromagnetic valve includes a pressure regulating knob.
35. (Previously Presented) The valve of claim 25, wherein the second adjustable member includes a plurality of holes in fluid communication with the pressure inlet and outlet holes.
